## RESEARCH INTERESTS

My research interests are in Software Engineering, in particular, improving developer productivity by designing better ways of mining abstractions of software systems. I hope to develop important approaches to address practical problems. In my PhD, my work focused on bugs and vulnerabilities related to the use of APIs and third-party code, e.g., libraries.

## WORKING EXPERIENCE

**AUG 2018 – DEC 2018**

**RESEARCH ENGINEER, SMU**

- Developed Coccinelle4J, a port of Coccinelle for the Java programming language. Coccinelle is a widely adopted program matching and transformation tool for C systems software, including the Linux kernel. Over 6000 commits have been in the Linux kernel with the help of Coccinelle in the past 10 years. We apply Coccinelle4J to the automatic migration of deprecated Android API usages.

**2018**

**BACKEND ENGINEER, GRAB**

- Worked with cutting-edge tools and managed cloud-based infrastructure.
- Owned a microservice on the critical path of all bookings. Improved testing to identify single points of failure, improving the resilience of the service to ensure uptime and SLAs are met.

**2016 –2018**

**SOFTWARE ENGINEER, WORKS APPLICATIONS CO. LTD**

- Worked on enterprise-grade HR Enterprise Resource Management software.
- Mentored junior engineers.
- Full-stack development from the back-end using Spring, management of Cassandra, Elasticsearch, to implementing a new user experience on the front-end with modern frameworks.

**AUG 2015 – MAY 2016**

**STUDENT SOFTWARE ENGINEER, TEAMMATES @ NUS**

- Involved in both planning and development of the project. Planned and managed weekly releases.
- Part of the team that introduced static analysis tools and CI to the project.

**MAY 2014 – AUG 2014**

**INTERN, TEAMIE**

- Developed several new features, including a feature that summarizes users' activity logs to identify highlights of their history on the platform.
